## INTERPRETATION

All ye who come into the world, and all ye who go out  
of it, know this, that the Gods hate Impudence.

“*Dove Diavolo, Messer Ludovico, avete pigliate tante coglionerie!*” was the jocular apostrophe of Cardinal Hippolito D’Este to Ariosto, who had inscribed the Orlando to his Eminence. The Hero of this performance, assuming to be sublimed above the level of humanity, concedes to his Readers full permission to apply to it, in every modification of paraphrase, the interrogatory of the Cardinal. They may freely ask, “Where the Devil, Master (Thaumaturgus), have you helped yourself to so many absurdities?” He can felicitously reply, adopting the subtle and convenient distinction of the Schools, “Varlets! these things are not *contrary* to reason, but *above* it.”

To be serious and historical: This most whimsical farrago of “all such reading as has ne’er been read” was compiled and reduced to doggrel at different intervals, some years since.

It owes its origin to an attempt to sustain, at a Civic Masquerade in Dublin, the character of a kind of literary Munchausen, when to render the representation intelligible (*lucus a non* —) a few of the less abstruse allusions to the marvellous, were hastily grouped together.—The Writer was subsequently induced to mispend some sleepless hours, in conjuring up, from the *Limbus* of a memory fatally tenacious of the odd and useless, the “visions of many dreamers,” and associating them with certain grotesque phantasms of his own. Thus has the fugitive extravaganza been shadowed out to the proportions of a book, which it was his first intention to have thrown into the world as a literary puzzle, “ungarnished with references.” Indeed, to have supplied satisfactory illustrations *seriatim*, would almost require a “re-union” of the Variorum Annotators. A comparatively small number of notes, derived from recollection, or the most obvious sources, have, however, been added, while the sheets were passing through the press. As he cannot afford to have his sanity impeached, the Writer, in conclusion, exclaims with Paul before Festus, Οὐ μαίνομαι—“I AM NOT MAD!”

### The Challenge.

VAIN VARLETS !

Con the scrolls of time,  
And search each sublunary clime :  
Condensing—soon as ye explore all—  
Your powers, both physical and moral.  
Through hosts of heroes Fame may roll ye on,  
From th’ Hunkiar\* Genghis to Napoleon ;  
Foiled there—midst living lights ye *may* go  
From †Petowack to Terr’ Fuego ;

\* *Manslayer.*

† Capital of the Arctic regions.

Scan your whole braggart brood, and *I* bet  
 That none from Tombuctoo to Tibet,  
 Sibir to Spain—Tobolsk to Burgos,  
 Shall dare compete with THAUMATURGUS,  
 Who recreates him in achieving  
 Deeds, which some dolts deem past believing.

Quite as an *Improvvisatore*,  
 I give this fragment of my story ;  
 Spurn dates and order with impunity,  
 And laugh at quantity and unity.  
 These sketches, autoschediastic,  
 Thrown off in rhyme, hight Hudibrastic,—  
 Fools, boasting *five*, not blest with *one* sense,  
 Will damn, as concentrated nonsense.  
 Not *Trismegistus*\* pond'rous pile  
 Of folios—they'd enrampart Lisle ;

\* He wrote 36,525 Books.— *Manetho—Class. Jour.* Origen produced 6,000.—*Lardner.*

*Origen's* tomes conjoined to *that* again,  
 The Books of *Memphis*, and the *Vatican*,  
 (From *Memphis* Homer filch'd the *Odysseys*,\*)  
 With *Omar's* holocaust of Codices,†  
 Could publish, of my awful actions,  
 More than a few inferior fractions.

### Stupendous Learning.

WERE sheets of fair papyrus curl'd  
 Round the vast vault that ceils the World,  
 While Ocean rolled from brink to brink  
 One broad, unfathomed, tide of ink,

\* Naucrates accuses Homer of having stolen the *Iliad* and *Odyssey* out of books in the Library of *Memphis*, now *Cairo*.—*Peignot*. This charge is disposed of elsewhere, in referring to *Pere Hardouin's Theory*.

† The *Alexandrian Library*.

'Twould not suffice—if Jews speak true—  
 To tell what Eliezir knew ; \*  
 He wrote—sad shelf that such huge *book* cumpers—  
 Three thousand rules for curing cucumbers.  
 Let, now, these ample scrolls be bent  
 O'er all the eclips'd firmament—  
 Bid every sea become a *Black* sea,  
 Then, place a Scribe on Cotapaxi,  
 Your best of stenographic Men,  
 And arm him with Allatius' pen, †  
 Wherewith (*unnibb'd*) that Scholiast Sage  
 Scrawled German-Greek, through half an age—  
 The Scribe, on Andes' rock-built ridge,  
 In short-hand may compress, abridge,  
 Squander his temper, time, and skill—  
 Wear to a stump that stubborn quill—

\* “ If the firmament were converted into vellum, and the ocean into ink it would not be sufficient to describe what Rabbi Eliezir knew. He indited 3,000 precepts respecting the management of cucumbers.”—Gregoire.

† Allatius used one pen for 50 years.

While with the whirling globe he turns,  
 Exhausting ocean's inky urns,  
 He'll prove those vast materials vain ;  
 The sheeted sphere could scarce contain  
 (Though crammed with cyphers to each scroll edge)  
 Brief rubrics, to my world of knowledge.

### My Origin.

MAN's information vague and scant is  
 Of my proud country, the Atlantis ;  
 Though th' Ancients fill'd its ports with squadrons,  
 It lies *incog.* to swaggering Moderns,  
 And off its northern naze, Perouse,\*  
 Blundering on breakers, closed his cruise.

\* If he was not cast away there, where else could he have been cast away ?

You ask its bearings, and its seas :  
 South of those isles, some few degrees,  
 Where—famed for their productions puzzling—  
 Willows bear nuts, each nut a gosling,  
 And Soland geese, in guise of fruit,  
 Hang ripening from each loaded shoot.\*  
 These point the track in part, but chief  
 'Tis mark'd, by that terrific reef  
 Where storm-tost Heinson's bark erratic †  
 Was stay'd, by magnets subaquatic.  
 In that far realm—though strange, 'tis true—  
 I rose—I was not *born*, but *grew*,  
 Not e'en begot in the same way as  
 Famed Appollonius Thyaneus,

\* Fulgous affirms, that trees, resembling willows, bear at the ends of their branches small balls, containing the embryo of a duck, which hangs by the bill, and when ripe falls into the sea, and takes to its wings.—See Buffon, &c.

† “Mogens Heinson, one of the early Northern Navigators, asserted that the progress of his vessel was arrested by loadstone rocks, under the water, off the coast of Greenland.”—Quar. Rev. Oct. 1817.

Betwixt a Wench and Salamander,  
 (Parents just fit for Alexander,)  
 I own nor Mother, Sire, nor Coz ;  
 Nature evolved me from a LUZ,\*  
 Which long in *pupa* state enshrined  
 The elements of Form and Mind.

### Precocity.

FAME blazons loud the pow'rs precocious  
 Of Chritchton, Heineken,† and Grotius,

\* The seed from which, according to the Jews, the body is to be reproduced. It is described as a bone, in shape like an almond, that can neither be broken, consumed, nor dissolved.—LUZ an sit os vertebrarum, an vero sesamoideum in pede dubitatur. Steph. Blancard Lexic. Med.

† Born in Lubeck in 1721. He had acquired a complete knowledge of the Scriptures at 14 months old, and was esteemed an excellent classical and science scholar in the fourth year

The second, ere his months reached *twenty*, took  
 Long learned lectures in the Pentateuch :  
 And when his fragile clock of life  
 Had struck the little age of five,  
 With aptness premature, he ran on  
 Through codes of Civil Law and Canon :  
 Gulped mathematics, mixed and pure, up ;  
 But ere th' expecting hand of Europe  
 The fruit thus early blown could gather, ah !  
 He died of literary plethora.  
 Let Lubeck's gossips talk with tremor, on  
 This lost illustrious Ephemeron.—  
 Judge of Mankind's amaze, when first  
 Upon the wondering world I burst !  
 My eyes, full-orb'd, reflected bright  
 Young intuition's lively light ;  
 Keen as a Calmuck's, too, whose glance,  
 Along the treeless *Steppes* expanse

of his age. He died at the age of five. His Life was published in 2 vols. by Martini, in 1730.

Describes the foemen's motley files,  
Still distant five long German miles,  
Gauging their squadron's breadth and bulk,  
He shews the *Hetman*, names the *Pulk*,  
And tells what chiefs, in each battalion,  
Are horsed on gelding, mare, or stallion.

Mere man, in this benighted time,  
Is deemed a mocking-bird—a mime ;  
No heritor of speech, but catches  
The *patois* of his nurse by snatches ;  
Mar but his ear's sound-seizing drum,  
Babe, boy, and adult, he lives dumb.  
Say, ye sophisticated fools,  
Deep read in all, save Nature's, schools,  
Why hath not History's noontide light,  
Chased these dull dreams of mental night ?  
A brace of Kings—sooth-searching sages—  
Reigning in different realms and ages,

One a shrewd Scot, and one a *Phrygian*, has  
 Proved language to mankind indigenous !  
 The first —the story is Pitcairn's—\*  
 Placed, with a tongue-tied nurse, two “*bairns*”  
 In a lone isle, and lowly cot,  
*Tabooing* then the sea-girt spot,  
 Till, nature-taught, the hermit-boys  
 Proved words to co-exist with voice,  
 And call'd for *crowdy* to the Crone, in  
 Hebrew, unmixed with Babylonian :  
 And of that dialect purely known  
 To Heber's holy house alone.†

\* He says, that two male infants were placed with a deaf and dumb nurse, in the island of Inchkeith, to ascertain whether man spoke naturally an articulate language, and if so, what that language was :—the result is stated to have been as described. Psammeticus, the Phrygian, made the same experiment.—Herodotus.

† The family of Heber, not having been concerned in the building of Babel, were, it is said, permitted to preserve the Hebrew language in its purity during the confusion.—Prideaux. Connections. Jennings's Jewish Antiq.

The next King, at an earlier era,  
For the same end, resolved to rear a  
Suckling Babe with a *sourde muette*  
Nurse ; and, as the bantling grew, it  
Shewed the point similarly solved—  
The oral organs soon evolved ;  
And the emphatic noun that broke  
From his first lispings, when he spoke,  
Was—no apostrophe to Jove—  
But *beccos*, Phrygian for a *loaf*.  
Even here, where moral swaddlings bind  
The young developments of mind,—  
Like cramping clogs, which, locked to insteps,  
Compel the Pekin Belles to *mince* steps,  
Frail Fashion's fiat there commanding  
Such outrage on the *understanding*,—  
Even here, from babe's untutored lips  
The dear dissyllable that slips,  
In *mamma* blends—so instinct leads it—  
The *mother* with *the fount that feeds it*.

So that, in fine, it matters not,  
 Be the Babe Phrygian, Frank, or Scot,  
 Or of whatever Clan or Clime,  
 Set in the ring of Earth, or Time—  
 Still, in the way of nurture, somewhat  
 Forms the prime note of Nature's gamut.  
 Prompt to fulfil her sacred nonce,  
 No *Infant*\* I—I spoke at once;  
 Scorn'd Men's mean *cognoms*—CAPET—GUELPH,  
 Chose and conferred upon myself  
 (This *my* first locutory *work* was)  
 The simple "style" of THAUMATURGUS.  
 Pedants of Cambridge, Oxford, Eton,  
 Applaud the congruent *epitheton*.  
 Not Chritchton, Grotius, nor e'en Heineken,  
 Dare claim precocity to *mine* akin;  
 Than Lipsius self, I proved astuter, tho'  
 That Sage philosophized *in utero*.

\* Quasi. *In. fari*.

More than *his* acumen—yea, more  
Than Belgium's schools can boast of lore,  
'Mongst natives, denizens, or aliens,  
Was centred in my *punctum saliens*.

I, if by system's slaves beguiled, would  
Imprimis tell my feats of childhood ;  
The Muse, who bows to my behest,  
Sings one—tax fancy for the rest.  
Oft have grave Jurisconsults shewed  
The marvels of that copious code,  
Which sways all actions and opinions,  
Throughout the \*Bogdoi Khan's dominions ;  
Whose dogmata subdue dispute,  
In matters mighty or minute.  
Volumes so vast, in stuff and size,  
That code fills, that your vulgar eyes,

\* *Bogdoi Khan*, the proper style of the Chinese Monarch.  
—De Lange.

To con mere side-notes to the pages,  
 Should shine and study through three ages.  
 Yet, THAUMATURGE, on the first day  
 He felt the vivifying ray,  
 When your blind babes would mewl, and scorn book,  
 Using this huge work as a horn-book,  
 Through the text *Leu*, the comment *Lee*,\*  
 From TA SING backwards to LEE QUEE,  
 Preface to finis, marge to marge,  
 All China's "Statute Laws at large"  
 Perused with relish, and digested them ;  
 Fo-hi and Confuce framed the best of them !

\* The earliest compilation of Chinese laws, found by Sir George Staunton, is that of Lee Quee, who lived 250 years before Christ. The *Leu* is the fundamental code ; the *Lee* the commentary. The Chinese assert that it would take 300 years to read their body of laws through.

## My Boots.

*Exempli gratia*, how my *gust* stirs !

Ere I'd "*perlustrated two lustres*,"\*  
 I'd pushed my theologic lore on,  
 Through Edda, Vedam, Talmud, Koran—  
 The last I loved, maugre its blunders,  
 Traversed its wilderness of wonders ;  
 It taught, that a colossal Ox,  
 Firm pedestal'd on Parian blocks,  
 Pois'd the huge earth upon his back,  
 As sumpter mule sustains a pack ;  
 Largest of living things, his horn  
 Caught the first twinklings of the morn,  
 While his lithe tail, whisk'd free and far,  
 Caused to nictate the western star.

\* Old Jocelyn, the Biographer of St. Patrick, mentioning that his hero was about fifteen years old, uses the phrase "*Perlustravit tria lustra*," which a recent translator quaintly renders he *perlustrated three lustres*.

Eastward I sped, and with my cutlass  
 Fell'd at one stroke this vaccine Atlas ;  
 These leathern tubes of ball-proof strength,  
 Of vast calibre, weight, and length,  
 JACK-BOOTS, of awful depth, wherein  
 I'm wont, in war, t' ensconce my shin,  
 Were diagramm'd upon his side :  
 And carved out from the reeking hide,  
 Each glittering sole which 'neath my *fetlock* lays,\*  
 Erst form'd a sandal for Empedocles ;\*  
 When Etna spatchcock'd the Philosopher,  
 His brazen brogues she chose to *toss* over,

\* \* *Eheu!* Alvary, and Priscian, 'lays' for 'lies.'—*Cockney*.

Cockneys, Catullus proves, were nurs'd in  
 Old Rome, e'en in her age Augustan.  
 Arrius as such the Bard impeaches ;  
 Kemble would bid him spare his H's (*uches.*)

DE ARRIO.

" Chommoda dicebat, si quando commoda vellet  
 Dicere, et hinsidias Arrius insidias,  
 \* \* \* \* \*  
 Ionios fluctus, postquam illuc Arrius isset  
 Jam non Ionios esse, sed Hionios."

Catull. Carm. lxxxiv.

As they had posed, beyond all question,  
Her ostrich organs of digestion :  
Such soles (if damn'd souls could, 'twere well,)  
May pace unharm'd the floors of Hell.

I've forged the hob-nails that environ  
The heels, from that strange "pig of iron,"  
Which on Otumba's *Pampa* lies,  
The gaze of philosophic eyes.\*  
Some think this Alp of ore, to pelt us,  
Was thrown unwrought from Nature's smelt-house ;  
If for the truth you care a button,  
Consult La Place, Poisson, and Hutton ;  
Learn'd Lunatics ! they've, to a fraction,  
Defined the Moon's and Earth's attraction ;  
From them the "flaming fact" you *may* know—  
This mass launched from the Moon's volcano,

\* One of those masses of meteoric iron, supposed by some philosophers to have been ejected from a volcano in the Moon.

Had there long weltered in a pickle  
 Of molten sulphur, lime, and nickel;  
 Earth's "*slough*" at last—I'm geognostic—  
 May be consumed by "Lunar caustic."

### Spurs.

THESE antique Spurs, whose hoops of steel  
 Peninsulate my clattering heel,  
 By turns, in Buskin, Boot, or Clog,  
 Were made for the "man-mountain," GOG;  
 This goodly ant'diluvian Giant  
 Had of the Deluge got a *sly* hint,  
 And—('tis so stated by a Rabbin\*)—  
 Had begg'd a birth in Noah's cabin,

\* The Rabbins make the giant Gog, or Magog, contemporary with Noah, and convinced by his preaching, so that he

But could not in that monstrous hulk—  
 'Tis of his longitude and bulk  
 A marv'lous, tho' authentic, index—  
 Lie, sit, stand, kneel, or squat *between* decks ;  
 Like Bacchus, who 's pourtray'd a-straddle  
 O'er pipe or puncheon, without saddle,  
 Gog, "*en Cavalier*," used the Ark as  
 A cock-horse, to sustain his carcass,  
 Bestrode its roof, and plunged those rowels  
 In the vast vessel's yearning bowels ;  
 Maintain'd his seat (in tacks) by *either* leg,<sup>1</sup>  
 Now by his *lee*, and now his *weather* leg :

was disposed to 'take the benefit' of the Ark. But here lay the distress—it by no means suited his dimensions ; therefore, as he could not enter in, he contented himself to ride upon it ; and although you must suppose that in stormy weather he was more than "half boots over," he kept his seat, and dismounted safely when the Ark reached Ararat.—*Warburton's Letters*. This same Gog had, according to the Rabbins, a thigh-bone so long, that a stag, pursued by the hunters, employed half a day in running along it.

And thus the Talmud Scribes, who *tell* huge  
Stories, swear Gog rode out the Deluge.

---

### Gallygaskins.—Hose.

THESE GALLYGASKINS of tough leather,  
That guard my loins from wintry weather,  
And fit each thigh with so much grace on,  
Are the true Ram-skin seized by Jason,  
And smuggled, in his stout Armado,  
From Colchis—th' ancient *El Dorado*.

Ev'n of the woof used in these Hosen,  
Which case, like Irish trowse,\* the toes in,

\* "Trowse are breeches and stockings, made to sit as close to the body as can be."—Cox's History of Ireland.

The Sister Fates, at my request, half  
 Supplied from their terrific distaff;  
*Lachesis*, whom my Valet wheedles,  
 Knit them with Cleopatra's Needles.

### Hat.

BAREPATE Suarrow\* started, *shock'd* at  
 The shape and shadow of my *Cock'd*-hat;  
 Huge hemisphere of felt—its span is  
 Like the Rialto's arch, at Venice.  
 Ceace, Ornithologists, to wonder  
 At bombast tales of Roc and Condor:  
 Polo,† who lauds the first, will swear he  
 Oft bears an El'phant to his eyry;

\* The Russian General usually went bare-headed

† Marco.

The latter fowl, at one short luncheon,  
 Gorges an ox and gulps a puncheon.  
 The villous sheathing of my bonnet,  
 And gloomy grove of plumes upon it,  
 In the fierce Vulture's pairing season,  
 I ravished from the crest and weason  
 Of—Rabbins lend your loftiest words—  
*Barjuchné*,\* Behemoth of Birds!  
 When but a flutt'ring eyasmusket,†  
 Her wings made midnight, ere'twas *dusk* yet:  
 Once from her nest a huge egg fell,  
 Earth shook beneath the shatter'd shell;  
 Forth gushed a deluge of *albumen*,  
 Swamping towers, towns, men, brats, and women.  
 Thus much the turgid Talmud fellows say;  
 The yelk now forms a sea—the *Yellow* sea.

\* The Bird Barjuchné, of the Talmud, covers the sun with its wings displayed. An addle-egg having dropped from its nest, crushed 300 large cedars, and overwhelmed 60 cities.—Gregoire.

† A young bird of prey.

## Wig, Queue, and Beard.

MANTLING my brows, this peerless Periwig  
 Is, by authentic proofs, the *very* wig  
 Made, when such skull-caps were yet rare,  
 From ill-starr'd Abs'lom's fatal hair.  
 Happy for him, had it been shorn,  
 And as a wig thus wove and worn—  
 He'd purchased life, when trees confined him,  
 By leaving the peruke behind him.  
 Alas, "the universal teacher,  
 Art," had not then supplanted Nature.

Close to my nape the *Queue*'s applied;  
 There with the Gordian knot 'tis tied;  
 Sheath'd in Adonis's wild *hog's* tail,  
 And tufted with that precious dog's tail,  
 Which Alcibiades, the ninny,  
 Docked, though the cur cost sixty *minæ*—

Proud that his mutilating *forceps*  
Gave table-talk to Attic gossips.\*

These horrent bristles, whose fierce patches  
Invest my mazard, as mustaches,  
Fringing the wrinkles to their *last* row,  
Were nourished 'neath the nose of Castro ;  
Hirsute Hidalgo !—he, we're told,  
Prizing his whiskers beyond gold,  
Raised, erst, a large loan on these *toopees*,  
And pawn'd them for some lacks of rupees.†  
The blowzy beard, whose curly copse  
Luxuriates round my firm-flesh'd chaps,  
Lending an air severe and serious,  
Grew on the dewlaps of Papirius,‡

\* Plutarch, article Alcibiades.

† John de Castro pledged his whiskers at Goa for £10,000. Baldwin, Prince of Edessa, also pawned his beard for a large sum, and it was afterwards redeemed by his father.—Alaric, by treaty, touched the beard of Clovis, and was thence accounted his Godfather.

‡ Papirius and the other Senators who remained with him at

- First Martyr of Rome's captive Senate ;  
 He swore no barber's blade should thin it,  
 Nor the vile suds of Gaulic tonsor  
 • Baptize, though Brennus' self stood Sponsor.

### Neck-Stock.

MY circling Neck-stock gives, in sooth,  
 So tangible a test of truth,  
 That self-sufficient "sceptic owls,  
 ("Who will not credit their own souls,  
 "Nor any science understand,  
 "Beyond the reach of eye and hand—  
 "But measuring all things by their own  
 "Knowledge, deem nothing can be known,")

Rome, when the Gauls entered the city, wore very long beards.—Livy, l. v.

Shan't dare to contradict or flout me ;  
 Not stubborn Saadi's\* self shall doubt me.  
 This Stock, with talismanic spring,  
 Is the *Jadh Morain*—mystic ring ; †  
 'Tis a thin, polished, pliant, cold bar  
 Of steel—a sort of “moral toll-bar,”  
 Which, spanning a narrator's nape,  
 Should any fiction try to 'scape,  
 Shuts the lungs' turnpike, *en garrotte*,  
 And gives the lie right in the throat.

---

### Gorget.

THIS Gorget's brazen frame was torn  
 From Alexander's wondrous horn,

\* “All wisdom consisteth in doubting.”—Saadi.

† Keating mentions a miraculous Collar, used to try the integrity of witnesses, which, if it were put round the neck of a person who designed giving a false narrative, continued

Which—more terrifically tonic  
 Than \*Morland's tube stentorophonic,—  
 Through two Italian leagues a lisp or  
 Sigh could sibilate or whisper ;  
 E'en of its under tones, the sound  
 Burst Echo's ear-drum, when 'twas wound,  
 Where Titan Cheops' dust lies hid  
 Beneath his Alp-like pyramid,  
 I, to awake its slumbering tongues,  
 Mustered my peerless powers of lungs,  
 Applied the bugle to my *lip* o' days,  
 Resolved to startle the Antipodes.  
 The shadow of its mighty cone,  
 On Egypt's mirage-mirror thrown,  
 Seemed to the marvelling Mamlouk's view,  
 As if the Fane of Shoomadoo,

closing till it had either throttled him, or extorted the truth. *Wilkinson's Survey of Ireland.* The Author of the "Memoirs of Captain Rock," transferring the Collar from the witness to the Judge, has made an ingenious use of this fable.

\* The inventor of the speaking-trumpet.

From its deep-seated base uptorn,  
 I'd raised, in mockery of the horn  
 Feigned as Orlando's thunder-breather,  
 Which sixty Stentors filled together :  
 And when (in nautic phrase) I "*blowed*"  
 In the forgotten "Phrygian mode,"  
 Furious and fierce, the brazen vast  
 Owned the old battle-breathing blast,  
 As if the struggling storms, long pent  
 In Eol's caverned tenement,  
 Had (through its rifted roof uphurled)  
 Burst at one belch upon the world ;  
 Whilst, heading his hoarse-throated host,  
 The God himself gave up the ghost ;  
 \*So, 'midst th' Olympic feats, in sunny days  
 Of Greece, the liquid-lipp'd Harmonides

\* Magnificent specimen of the anticlimax—"Thunder and Timotheus strive for mastery."—Hurricane, earthquake, and explosion, likened to the piping of a warbling fifer.

Exhausted, in his warbling fife,  
Th' ethereal aliment of life.  
At my first blast, the tube was rent  
Right from the mouth-piece to the vent ;  
'Neath the tornado gust, the land  
Heaved its huge hills of living sand,  
Whose billows (high as waves of *Noah's* seas)  
Swamped Archipelagos of *Oases*—  
Gay groups of sand-encircled isles,  
Where thirsty Nature deftly smiles,  
And flings, rejoicing in her reign,  
Her greenest garment on the plain.  
The blast from *Afric's* steaming side  
Roll'd back the mighty midland tide,  
Whose surges toss'd their daggling spray on  
The stars that stud the *Empyrean* ;

### Pipe and Snuff-Box.

DEEP as huge \*Teutobocchus' "*Chako*," †  
 The bowl where glows my rare tobacco—  
 (Whom phthysics teaze not, toil can't tire)—I  
 Broke from the peak of Dhawal'giri, ‡  
 Earth's newly-known, yet boldest boss,  
 Which leaps into the clouds two *ross*;

\* The skeleton of King Teutobocchus is said to have been found in the year 1613, and to have measured twenty-six feet in length.

† The military cap.

‡ The loftiest of the Himala Mountains, 26,000 feet high.

Its circuit, measured at the base, is  
 Full half a *crore* of Pundit's paces.\*  
 The Pipe's lip-piece, wherewith I *cram* mouth,  
 Is the true wise-tooth of a Mammoth,  
 Culled by my body-servant, Toby,  
 On the alluvial isles of Oby ;  
 Its soldering is of molten lava ;  
 Its tube the Upas-tree of Java—  
 That tree, whene'er I visit, grows gay ;  
 I wear its blossoms as a nosegay.

Sol, at th' Equator, crack'd (no *small* nut)  
 Earth's shell—like shell of roasted walnut ;  
 I probed the centre's depth infernal,  
 And scooped my Snuff-Box from the kernel,  
 Which fills that dark, deep-seated valley—  
 ('Tis the "magnetic Pole" of Halley) ;

The spheric mass of loam and rock  
 Ne'er suffered such convulsive shock  
 Since Adam made Eve bone of *his* bone—  
 It caused the earthquake that razed Lisbon.

### Watch.—Its Sonnette.

My Watch, a true antique, was plann'd,  
 And fashioned by that Artist's hand,  
 Who framed in Basle the cozening chime  
 Which once, by antedating time,  
 Parried the foeman's fix'd attack,  
 And saved the town from storm and sack.\*

\* Basle was to have been assaulted by the French, when the town clock struck one at night. The artist who had the care of the clock, coming to a knowledge of the signal, made the chimes strike the hour of two instead of one; and the ene-

Still, at the hoax, an arch automaton  
Winks (jeering wag!) the steeple's *summit* on—  
Lolls his loose tongue, by secret screws held,  
In mockery of the Gaul bamboozled.

OF Memnon's form, the voiceless wreck stands  
Wallowing, like giant quagg'd in quicksands.  
Time was, when the reviving ray  
Of orient or departing day,  
Athwart those marble features thrown,  
Call'd forth a deep and dulcet tone.\*

my, imagining that they had arrived too late, relinquished the attempt.—The clocks of the town have continued, since that event, to go an hour faster than elsewhere—and a head which lolls its tongue out deridingly, with its face turned towards the road by which the enemy retreated, is referred to as confirming this tale.

\* Humbolt was informed that sounds like those of an organ were heard at sunrise from the granite rocks on the banks of the Oroonoko, produced, he supposes, by the difference of temperature between the external air and that contained in the crevices.—Jomard heard at sunrise, in a monument at Karnak,

One glance—I was my own espial—  
 Proved that broad bust was erst a Dial ;  
 Its cheeks the field—its nose the *gnomon*—  
 Such nose might Mahomet well *roam* on ;\*  
 I probed its apex, and there found  
 The latent principle of sound,  
 Which, seized to make my Watch completer,  
 Rings as *sonnette* to my Repeater.

## Flask.

MY Powder-flask, for war or sport, is  
 Made from th' *exuvix* of the Tortoise,

a noise resembling a strong breathing. This is supposed to explain the tones of the statue of Memnon.

\* Mahomet is said to have travelled over Allah's nose during ninety days, while receiving the revelations of the Koran.

That once 'twixt Eagle's pounces squeaked,  
Thence fell, while all Parnassus shrieked ;  
For the squab reptile, mailed in horn,  
Crushed pale Melpomené's eldest born.  
So Pallas shriek'd, when the proud power  
Of Venice\* hurled war's iron shower  
O'er Athens, and one impious shell  
On her time-honour'd temple fell,  
Shivered the dome, attain'd the *hearth* anon,  
Then roll'd and ravaged the proud Parthenon,  
*Pitting* with cavities, like pigeon-holes,  
The busts of Phidias's originals.  
Your mortar-shells are used to thump roofs ;  
My Tortoise proved Bards' skulls no bomb-proofs—  
Breaching the horn-work of his head,  
It struck old Æschylus stark dead.

\* Under Morosini.

## Hints to Nature.

I MIGHT—it is not in *reproof* meant—  
 Help Nature's sage self to improvement :  
 Thus man's first masticators, 'whilk' teeth  
 (*Whilk* 's which in Scottish) we call "milk teeth,"  
 By my suggestion should survive  
 To life's half-way-house, thirty-five ;  
 Then sapp'd by mercury, mined by sweets,  
 Carious from tartar or hot meats,  
 While they in gradual tontine drop,  
 A second, as substantial, crop  
 Should on the gum's red esplanade  
 Renew the bony balustrade.  
 Again : were from hard knocks his *shin* saved,  
 Man would be from a load of *sin* saved,  
 Twitch but that painful spot, alas ! he'll  
 Curse like a Roman planting Basil.

Of Nature's journey-work corrector,  
 I give a simple shin protector,  
 Let her, when fabricating *more* legs,  
 Place all men's calves upon their *fore* legs ;  
 To save the shin, each calf, placed *thus* on,  
 Will form a most commodious cushion.

### Beeds of Deglutition.

To prove, in brief, my powers surprising  
 Of guzzling and of gormandizing,  
 Here's an example—who can match it?  
 I'll eat a Mammoth—if you'll catch it.  
 Take, redolent of turf, and flowing  
 From the sly stills of Innishowen,  
 Of pure Poteen—nectareous stuff,  
 Sweet as stolen kisses—*quantum suff*

 In the strong tide—together screw  
 Of Ireland's Tow'RS‡ the tallest two,  
 Hollow and high, nought ranks before 'em,  
 To form a muddler for the jorum.  
 That bowl—that plumbless pond of punch,  
 Meet diluent to my Mammoth lunch,  
 The crater'd hill can scarce contain it,  
 Still—if you'll hand it me—I'll drain it.

\* A Lake near the summit of Mangerton Mountain, County Kerry, which the natives pretend to be unfathomable.—Bushe says, “this pool being supplied by an inexhaustible spring, may be, and was consequently, compared to the bowl of punch round which a party was assembled, into the bottom of which Satan inserted an invisible spring, imperceptibly recruiting the continued decrease of the liquor within.”

† Two mountains, so called, forming very striking features in the scenery of Wicklow.

# The Angling.

---

## Fishing Gear.

IN those dread days, when news ran *wholly* on  
The means and measures of Napoleon,  
I left mad Europe to its wrangling,  
And went in peaceful mood an angling.  
My ROD, a trunk of giant girth,  
The nursling of volcanic earth,\*  
Was "*forced*" 'midst Bronté's lava grottos—  
Red Etna served it as a hot-house,  
Its hollowed stem received of yore  
Brydone, Recupero, and Hoare,

\* The great "Chesnut Tree of a hundred horses," growing on Mount Etna.

Queens, Quidnuncs, Bandits, and their horses ;  
 Those who took notes, these who took purses,  
 Here crack'd their bottles, and its *best* nuts,  
 And made this monarch tree of chesnuts,  
 “ *Di cento cavalli Castagno,*”  
 By turns a bivouac and a bagnio.

The spear and ferule, which this rod  
 Is fitly arm'd with, hooped and shod,  
 Were forged, by a peculiar process,  
 From ancient Rhodes' wide-legg'd Colossus ;  
 The skull alone uninjured lingers—  
 I tweak'd its nose off 'twixt my fingers :  
 Art borrowed from the nasal ridges  
 The hint for framing metal bridges,  
 Such as o'er sundry streams *across* go ;—  
 One nostril forms the Bell of Moscow.

I stretch'd the hemp that forms my line, a-  
 -long the wide, wondrous Wall of China,

Twelve wains abreast can on its cope walk—  
 I made the parapet my rope-walk,  
 That line has posed the strongest jaws, Sirs—  
 Its “strands” were twisted from the hawsers  
 That had long wrestled with the *fierce* seas,  
 Connecting the pontoons of Xerxes.  
 What Galleass, Carrack, Bucentaur,  
 Or Argosy, for trade or war,  
 Rivals the Cyclad\* Ship!—her frame is  
 Equal to fifty tall 'Tliremes ;  
 From forty banks, a thousand “sweeps” †  
 Propell'd her through the labouring deeps ;  
 Her anchor, of a single fluke,  
 Forms for Leviathans my Hook.  
 And, e'en to frame my simple reel,  
 I seized Ixion's restless wheel.

\* Built by Archimedes for Hierro. Wood sufficient for fifty galleys was expended on her construction. These huge vessels were called Cyclades or Ætnæ.

† Sweeps—the great oar of galleys, plyed by several hands.

'The Bait which hangs my fish-hook's point on,  
 Is a colossal Mastodonton,  
 Much huger than the hugest *E*-lephant  
 That e'er browsed jungle shrubs in *the* Levant,  
 Or (a decoy but rarely *used* here)  
 The carcase of an Irish Moose-deer,  
 Whose antlers—'tis not an invention—  
 Are twice ten fathoms in expansion.

### Deep-Sea Fishing.—Procerity.

I moored my bark, and plunged my bait  
 Far in Magellan's tortuous strait :  
 Whilst trolling there, 'twixt day and dark,  
 I hook'd a most voracious shark,  
 And, anxious quickly to inspect him,  
 Instructed Toby to dissect him.  
 Of such Dan Pliny dares to tell ye,  
 Who had a Soldier in his belly ;

My fish must have been vastly larger—  
He'd pouch'd a Warrior and his Charger;  
A monster man, whose buckler *could* do  
The work of an entire Testudo;  
His length exceeded, by a perch or  
Two, the fossil bones which Kircher\*  
Allots to Patagonian Pallas,  
Whom fierce King Turnus, in his malice,  
Despatch'd in fight, as poets tell,  
To drill Nick's grenadiers in Hell;  
He—measuring some few score of metres—  
Might peer with ease above St. Peter's,  
Whose dome—which could not be a *light* cap—  
Would scarce have served him for a night-cap;  
For he, when living, used that big block,  
The Sphynx of Egypt, as his wig-block.

\* Kircher asserts, that the bones of Pallas were found near Rome in his time, and his stature ascertained to have been so great, that he could have overlooked the highest walls of the city.

Before the harbour's mouth of Bona,  
 I kill'd the landlord Whale of Jonah ;  
 He was, as antiquaries wish,  
 A very venerable fish,  
 Known, from Gibraltar's Straits to Behring's,  
 As an alarm-word 'mongst the herrings.

### The Sea-Serpent.

OF old, in Afric's arid regions,  
 A huge Snake check'd Rome's stoutest legions ;  
 And as their arms could do him *no* hurt,  
 Just made one mouthful of a cohort—  
 Till, hurled from Catapult, a stone  
 Struck the strong spine and crush'd the bone ;  
 This feat was (though historians *may* gull us)  
 Achieved by famed Field-marshal Regulus :

High in the Capitol the skin he  
 Hung up—'twas measured there by Pliny.  
 Rome, blot away these classic wonders  
 From thy prolific page of blunders ;  
 Or own thyself, direct and candid,  
 Unfit to meet me single-handed.  
 I've slain a Snake—I love comparisons—  
 Would scare your field-force, fleets, and garrisons,  
 Which, match'd with your's, would have surpass'd it  
 So far——they should be thus contrasted :  
 A cock-boat to the ark of Noah,  
 A "hair-born elver"\* to a Boa ;  
 Queen Mab's wand to Alcidés' baculum ;  
 A Kraken† to his least tentaculum.  
 Whilst I pursued my angling chase, in  
 To the unfrozen Polar basin,  
 In half the time I've spent in scribbling,  
 I felt the great Sea-Serpent nibbling ;

\* A small eel.

† Pontopiddan.

Gave him (lest all he'd run away with)  
A hundred leagues of line to play with ;  
Scourged by his tail, huge icebergs spun  
Like tops, by schoolboys lashed in fun.  
His gory jaws discharged a flood,  
Vast as the Amazon, of blood,  
Which, daggling far and wide the *shed* snow,  
Accounts for Captain Ross's red snow ;  
And as I coax'd him towards the *dry* land,  
He twined his body round an island—  
One whisk sufficed me to unwreath him ;  
I popp'd my landing-net beneath him,  
And flayed, upon my groaning gabbard,  
His tough shagreen, to make my scabbard.  
Then, while yet wriggling in the toils,  
Wound his lithe length in spiral coils,  
Much like, when braced with bands of cable,  
In size and shape, thy tow'r, O Babel !  
And fashion'd just as your Fishmongers  
Are wont to " collar " Eels, call'd Congers.

## Mermaid.

I ONCE, while making with my seine a  
Mere random haul, off St. Helena,  
Took that apocryphal and rare maid,  
Whom modern mortals style a Mermaid ;  
A buxom nymph, half fish, half human—  
Her cheeks had all that lovely bloom on,  
Which golden-hair'd Aurora gave,  
When her first day-beams kiss'd the wave ;  
She dinn'd my ears with Attic Greek,  
Glib as our land-born damsels speak,  
And I pursued her through the *aeolists*,  
The most inquisitive of querists.  
Maids of all sorts are prone to coax men,  
She had bewitch'd the first of spokesmen—  
Demosthenes was long her suitor,  
Yea, and her literary tutor ;

Greek to the waves he used to *gabble* hard—  
 She play'd Eloisa to his Abelard ;  
 And as the Archon was a *pet* of her's  
 Soon conn'd by rote his tropes and metaphors.  
 Her great longevity I imagine was  
 Due to her structure cartilaginous.\*  
 And from that gownsman and this *fickle* lass  
 Sprang, by descent, "*Il Pesce Nicholas*;" †  
 Amphibious man, he loved t' abide  
 In the dark depths of ocean's tide ;  
 Whence rising, 'midst Trinacrian rocks, again,  
 He charged his lungs' large lobes with oxygen,  
 Inspiring at one draught, they tell us,  
 A day's munition for his bellows.

\* Animals so constructed are known to be particularly long-lived ; some go so far as to think that certain species of fish, on this account, are only accidentally mortal.

† The Diver Nicholas, styled "*Il Pesce*." He plyed, as a sort of aquatic post-boy, between Naples and the Island of Sicily—lived whole days in the water, and perished in attempting to recover a gold cup, flung by King Ferdinand into the vortex of Charybdis.

With digits webb'd, his limbs seem'd *all* fins—  
 He prank'd 'midst porpoises and dolphins,  
 Till gull'd, to seek the golden guerdon and  
 Imperial smile of tyrant Ferdinand,  
 He dared Charybdis' dreadful womb—  
 Lost the poor prize, and found a tomb.

Eusebius (if alive) would smile at  
 My Sea-Maid's hoax of the old Pilot,  
 Who heard—Isle Paxas being to leeward—  
 Her deep-toned voice, directed seaward,  
 Cry "Thaumous, when thou reachest shore,  
 "Announce, THE MIGHTY PAN'S NO MORE!"  
 When the astounding tidings spread,  
 Prince, Priests, and People quaked with dread;  
 And this brief phrase of fear and mystery  
 Caused the first "Panic"\* known to history.

\* There are various opinions respecting the derivation of the word "*Panic*." This supernatural announcement, taking

One of those dogs who dive for pearl,  
Eloped with my aquatic Girl.

into account the alarm produced by it, furnishes, perhaps, as plausible an etymology as any that has been hazarded.

## The Concurſus.

SOJOURNING once at Iſpahan,  
I met with a myſterious Man,  
One who, through twice nine hundred ages,  
Communed with Sinners, Saints, and Sages,  
In each variety of clime,  
Yet ſeem'd but riſing to his prime ;  
Robuſt of limb, and ſound of *cranium*—  
He lived expecting the Millennium.  
Proud of the interview—I held,  
With this clear-ſighted Seer of Eld,  
Historic conſerſe, cloſe and long ;  
Found his lore deep, and memory ſtrong  
He rivall'd—you'll forthwith ſuppoſe ſo—

 Then, full of the rare exhibition,  
 Defied me to a competition.

### Cold Collation—Saltness of the Sea.

His Viands\* gave him scope to gabble on ;  
 Brawns from the magazine of Babylon,  
 Preserved by processes so clever,  
 He swore that they'd hold sweet for ever,†  
 Yet stared when I gave, to ensure them,  
 Salt from Lot's Wife, that he might cure them :  
 For altho' Radziville‡ had sought

 In by-gone days of old Josephus ;  
 And saline sweats, from her limbs trickling,  
 Are now, as then, that lake bepickling.  
 So strongly doth the salt impregnate .  
 Its wave, that—did it storm or stagnate—  
 Carracioli's buoyant trunk  
 Beneath the surface ne'er had sunk.\*

I learn'd, indeed, from old Xamolxes†  
 How all the great seas became *salt* seas—

endeavoured, without success, to discover some remains of the Pillar of Salt into which Lot's Wife had been metamorphosed, and which Josephus asserts to have existed in his day. The modern natives of the neighbourhood, being either more industrious or more fortunate than their predecessors, exhibit the relics of the statue.

\* "The body of Carracioli, rose to the surface of the sea, into which it had been thrown after his execution at Naples, although shot weighing upwards of 200lbs. still continued attached to it."—*Southey's Life of Nelson*. Down trickling in a thousand rills—  
As if old Notus, sung by Maro,  
Chose for his roosting-place Hierro,  
Shook his wet wings, and kempt his hair,  
And wrung his reeking whiskers there.

For many an age “the fount that played  
In times of old through Ammon’s shade,”  
By Turk or traveller vainly sought,  
Was deemed a fairy fiction, wrought  
By History’s Grandsire, till the hour  
When, armed with more than Bleton’s\* power,  
I paced, with sympathetic tread,  
Above the spring’s conjectured bed,  
Felt of affinity the thrill  
My sensate frame bore to the rill :

\* The famous discoverer of subterraneous springs and waters by sympathy.—*Literary Journal, published at Bouillon.*

A subtile *aura* from the well  
 Doth permeate the terrene shell,  
 And, floating round my footsteps, brings  
 Strange knowledge of those viewless springs,  
 Which, hid from vulgar mortals, sleep  
 In native basins, dark and deep.  
 Led by this sense, I traced the course  
 Of the *Fons Solis*—reached the source,  
 And, through th' authentic ancient shaft,  
 Thence quaff'd—('twas eve)—a *tepid* draught :  
 Flowing by fall'n fanes of the *God*, it does  
 Confirm the tale of old Herodotus.\*  
 This brimming “bardak”† which I drew,  
 To the Fount's mystic virtues true,

\* “ Supposing the temperature of the Fountain to have been 60° in the evening, it might be 100° at midnight. This does not altogether accord with Herodotus, who says that the water is cold at noon and midnight, but warm in the morning and evening. We have, however, to recollect that he was only told of the phenomenon.”—*Belzoni*.

† Earthen vessels, made at Minieh in Upper Egypt, and used to keep water cool.

Pours a meridian stream, as chill  
 As Arctic iceberg's snow-born rill ; \*  
 Its nocturn wave, to seeth or scald, runs  
 Hot as the gush from Geyser's † cauldrons :  
 Sol steals, while Luna yields, caloric ;  
 Or—take an illustration Doric—  
 The spring in “ Ammon's Elloah ” hid, might  
 Make grog at noon and punch at midnight.

### Wines.—Blood of the Swiss.

AN ample magnum flask, that hung  
 From his scrip belt, th' Unknown unslung ;  
 And, while his liberal hand outpour'd  
 The large libation o'er the board,

\* “ At noon the water was quite cold.”—*Belzoni*.

† The boiling springs of Iceland.

With bearing high, and tone of pride,  
And soul exhilarate, he cried—  
“ Where the \*Birs’ Alpine torrents toil,

“ And pour, with ever-murmuring wave,  
“ Perennial requiem to the Brave,  
“ Who for Helvetia fought and fell—  
“ Fame speaks how gloriously and well—  
“ The teeming vine-trees’ leech-roots drain  
“ The arteries of the warrior-slain ;  
“ And when, by Autumn’s zephyrs fann’d,  
“ Rich fruitage woos the gatherer’s hand,  
“ To sound of tabor, pipe, and drum,  
“ The patriot Switzers mustering come,

\* This spot is consecrated by the heroism of 1,500 Swiss, who checked here the invading army of Louis XI. amounting to many thousands. Of the Swiss only 16 survived ; and these, in the manner of the Spartans, were branded by their countrymen with infamy for abandoning the field. In commemoration of the action, the inhabitants of Basle assemble periodically at the Convent of St. James, to drink a wine called “ Blood of the Swiss,” produced from vines growing where the Patriots fell.

“ Crush the ripe clusters, redly glowing,  
 “ And drink, with cups and hearts o’erflowing,—  
 “ Whilst more than filial love inspires—  
 “ The memory of their Spartan Sires.  
 “ To taste that spirit-stirring wine,  
 “ ‘ Blood of the Swiss,’ I *breathed—a Vine!*  
 “ And from its purple gushing caught  
 “ This juice, with generous impulse fraught.”

### Malmsey—Philetas—Sylphium.

My Cases came—I crack’d a bottle;  
 A legend, compassing its throttle,  
 Pronounc’d it (sanction’d by its *tint*, age,  
 And flavor,) Malmsey, of the vintage  
 That Clarence\* chose, as History saith,  
 To prove his “passion strong in death.”

\* The only favour granted him was the choice of his death; and he was privately drowned in a butt of Malmsey, in the

Illustrious Epicure ! in *a* canal

 Flies, in Madeira merged, revive—  
 P'rhaps this induced the Duke to dive.  
 My Goblet was the Fool's-cap leaden  
 That old Philetas\* moor'd his head in.  
 Why was his cranium thus enchaliced ?  
 He carried much more sail than ballast,  
 And thinking Earth's attraction frangent,  
 Fear'd he'd drift moonward in a tangent :  
 While hiccup'd now my second cork,  
 Th' Unknown "wished for the throat of stork,†  
 And palate all its length."—Perfume

 The broad bung, like a Congreve rocket.  
 Let mean Athletes with Milo wrestle —  
 I heaved aloft the mountain vessel,  
 And gorged at one draught, stretch'd supine,  
 Its inland sea of mighty wine,  
 Till the vast void rang to my ear,  
 Like Troy's horse 'neath Lacon's spear.\*  
 Thus, having drain'd th' abyss of drink out,  
 And put each tiny Topper's link out,  
 I stood astride—being mildly mellow—  
 Across a prostrate wine-logg'd fellow,  
 A Scot—I ken'd him by his Thistle—  
 And blew a flourish thro' the Whistle;  
 Each glass was shivered on the table,  
 The house was rent right thro' the gable,  
 The passing birds that wing'd the wind  
 Dropp'd, deafen'd, paralyzed, and blind;

### Codification.

TH' Unknown, in our refined refectations,  
 Shewed, from his Manuscript collections,  
 Gems writ ere pens in gall† were dipt.—I  
 Avowed the *Codices Rescripti*,

\* When Flaminius gave liberty to Greece, such an acclamation arose, that the very birds fell from heaven. “Ferrari de ritu veterum acclamationibus et plausu.”—Plutarch.

† Sir H. Davy suggests, from the nature of the ink in the Papyri MSS. and the silence of Pliny, that up to the period of the destruction of Herculaneum, the Romans never used galls and iron as a writing ink ; and probably this invention was contemporary with parchment, of which the earliest MSS.

 That *female Damsel*,\* he'd contend,  
 Wrote the first letter ever penn'd.  
 The gloss was all his own—in troth,  
 He had more lore than any Goth. †  
 Ere I touch'd topics more important,  
 I gave a practical and *short* hint,  
 That Dame Atossa‡ should be reckon'd,  
 At best, of letter-scribes but second ;

at present known are the *Codices Rescripti*, discovered at Rome and Milan by M. Mai.

\* This word applies to either sex. Pepin was styled the "Damsel."

† The Goths were highly distinguished for genius and learning.—*Jornandes*.

‡ Clemens Alexandrinus, and Tatian also, who copies from Hellanicus, the historian, affirm that the first epistle ever composed was the production of Atossa, a Persian Empress.—Many suppose that the letter Homer's Prætus gave to Bellerophon, preceded the letter of Atossa.

## The Shoo-King.

I CAUGHT th' Unknown's eye now o'erlooking  
 My unique copy of the Shoo-King,\*

\* “ The Shoo-King originally extended to 100 chapters.—These consisted of short sentences, which were then, as they are now, got by heart. After a lapse of sixty years, most of those who knew the Shooking were either dead or had lost the recollection of it. ## Pere Hardouin.

HARDOUIN! the libell'd and the learn'd,  
 Receive, tho' late, the fame thou 'st earn'd;  
 Resolved, from hence, no more to *let* you lie  
 The mock of pedant Literatuli,  
 Great THAUMATURGE proves, in his ruth,  
 Thy slighted theories\* stark truth.  
 Mute be, for aye, the sceptic scoffers—  
 I now unlock'd two antique coffers,  
 Carved on whose lids, devices quaint—  
 A Satyr here, and here a Saint—  
 Tell they were wrought in classic climes,  
 When Christian touch'd on Pagan times.

\* Hardouin maintained that the writings of the ancients were forged by Monks of the 13th century, with the exception of the works of Cicero, Pliny's Natural History, and the Georgics of Virgil. The Æneid he believed to be an allegorical description of St. Paul's journey to Rome.

Within, by my researches *brought* there,  
 Of every ancient classic Author  
 Was found—each in its proper pigeon-hole—  
 The very autograph original ;  
 And all the books lodged in those trunks,  
 Deem'd Heathen erst, were writ by Monks.\*  
 This truth, long since, sage Hardouin had  
 Promulged—the Age pronounc'd him mad ;  
 And e'en th' Unknown, a shrewd and cool man,  
 Called it the “ reverie of a Schoolman.”  
 But when I give, as I unroll,

 Thro' the mind's adits—ears and eyes—  
 The lightning of conviction flies.  
 I shew'd first—what the Bard would *fain* hide—  
 “ *Fra*” Virgil's rough draft of the *Æneid*.

\* The Monks are here thrown farther back than the time at which Hardouin and others suppose them to have arisen. The general belief is that they originated with St. Anthony, A. D. 305 ; others trace them to the Therapeutæ, or Paul the Hermit.

† The Caliph Hassan being at table, a slave unfortunately let fall a dish of meat, reeking hot, which scalded him severely. The slave fell on his knees, and repeated the above words, adding (also from the Alcoran) “ Paradise is for those who restrain their anger.” “ I am not angry with thee,” replied the Caliph—“ And for those who forgive offences.” “ I forgive thee thine,” answered the Caliph—“ But above all, for those who return good for evil.” “ I set thee at liberty,” rejoins the Caliph, “ and give thee ten dinars” (as a *viaticum*.)

The “ *Miserere mei Deus*,” was called the Neck-verse, as the reading of it formed the qualification by which culprits availed themselves of benefit of clergy.

\* Mahomet attributed a considerable portion of his successes to the spirit, energy, and admirable instinct of Alborak, his favourite charger. This horse is believed to have been a Genet of the kind called by Pliny "*thieldones*," tellers or measurers of steps, and said by Justin to be the offspring of the Winds. The Arabian Commentators, amongst other extraordinary proofs of the sagacity of Alborak, relate that he refused on a vital emergency to proceed with his master, until he had extorted from his all-powerful intercession the gift of an indestructible soul, and enjoyments of eternal duration, befitting his taste and species. \* In the disastrous retreat of Cortez from Mexico on the "*Noche triste,*" the Spanish standard was carried and almost miraculously preserved by Alvarado, who affirmed that he had passed at a leap the last aperture in the causeway, measuring upwards of thirty-two English feet. Bernal Diaz, one of his companions in arms, in his history of the conquest, expresses *reasonable* doubts of the possibility of the feat. Some have, however, endeavoured to reconcile it with truth, by supposing Alvarado to have availed himself of the assistance of the staff of the standard, which resembled that of the Labarum of the ancients, and might, therefore, have been used in the same way as the pole in the school-boy sport of "Hare and Hounds."

\* The subject of this widely-extended tradition is supposed to have been prominent in offering indignities to the Redeemer on his way to Calvary, and to have been condemned to wander over the earth, until the “ Second Coming,” branded on the forehead with a fiery cross. Paul Eitsen, Bishop of Sleswick, asserts that he had a long conference with him; and many persons, at different and very distant periods, profess to have met him under the name of John Buttadeus.—Joannes de Temporibus, who is reported to have lived upwards of three centuries, might well have been mistaken for him.

giomontanus made an eagle, which, on the approach of the Emperor, flew a considerable distance to meet him, and returned to the city with him. " Let us," says Peter Ramus, " cease to wonder at the Dove of Archytas, for Nuremburg boasts an Eagle which soars on geometrical wings."

He said, that had he, in his gay days,

 The serpent-wand that Merc'ry holds ;

teeth, instead of 30 or 32 with which they had been furnished prior to that period.

\* Among the moderns, Hasselquist, Savary, and Bruce, have seen and described these "serpent charmers," of whom it is remarkable, that their secret has remained undiscovered through 2000 years. "I will not hesitate to aver," says Bruce, "that I have seen at Cairo a man take a *Cerastes* with his naked hand, tie it about his neck, like a necklace, after which, beginning with the tail, he ate it, as one would do a stock of celery, without any repugnance."

Then, deeming it no dish inept, he'll,  
 Like a mere radish, scranch the reptile.  
 I, who have used—unharm'd as those—  
 Whip-snakes as garters to my hose,  
 Garnished my insteps, too, on dress days,  
 With shoe-ties, each a quick Cerastes,  
 Seized (for a relish,) like a Harpy, on  
 The wakeful and malignant SCORPION.  
 The tenants of the Zodiac's ring,  
 Amazed, beheld him strike his sting  
 Right to his very vitals, *thro'* his hide—  
 For me he perpetrated suicide.\*  
 While I, amidst applauses boisterous,  
 Pouch'd him, like shell-fish at an Oyster-house.

Sharp yearnings soon I felt for dinner—  
 'Tis held, that exercise, or *thin* air

\* *Felo de se* is not altogether confined to the human animal. “When all the blandishments of life are gone,” the Scorpion is said occasionally to give to the act the sanction of his example.

In regions elevate, produces  
 Strange wamblings 'midst the gastric juices :  
 Not soldier, plund'ring for his ration  
 La Trappe's pinch'd Cenobites in Passion-  
 -Week, could meet scene more discouraging,  
 Than are the Zodiac's fields for foraging ;  
 The starvelings, in its circle pent,  
 Seem damn'd to a perennial Lent.  
 Leave lean Astronomy her twelve signs,  
 I love your fat *Inn-keeping* Elves' Signs.  
 Toby, whose feats (they claim some stanzas)  
 Ralpho's eclipse, or Sancho Panza's,  
 Stout Squire ! the most adroit of Butlers,  
 Most "cunning" Cook, and pink of Sutlers,  
 Seized on the PISCES—they were *fat* fish,  
 Black Soles, or some such sort of flat-fish ;  
 Firm and well-flavoured, fresh and viscous,  
 He fried them on the DOG-STAR'S *discus* ;  
 And then he e'en contrived to nab sauce,  
 Converting CANCER into Crab-sauce.

## Kepler.—Solar Maculae.—The Pole.

THE Signs despatch'd, I turned sunward  
 The wing'd Steed's head, and gallopp'd onward.  
 Nom ore each stupid System-monger  
 Shall do sage Kepler's memory wrong, or  
 Supplant the scientific *troth* he says  
 By false, tho' common-place, hypotheses.\*  
 'Twas his to gauge, define, and trace,  
 The orb'd occupants of space,  
 And demonstrate the shoreless sky  
 As a true Ocean hung on high,  
 Thro' whose etherial tides so deep  
 The Planets in fixed orbits sweep ;  
 Not, as your later seers assert,  
 Dark masses, pulseless and inert,

\* “ Kepler supposed the planets to be huge animals, who swam round the Sun by means of fins, acting on the ethereal fluid as those of fishes do upon water.”

But piscatory creatures, rife  
In every attribute of life,  
With oary fins and rudder tails,  
Plied at their poles, they swim as whales,  
(Star-fish Leviathans !) in play  
Around the glowing lamp of day,  
Like fascinated fish, trepann'd  
By the night-Poacher's blazing brand.  
Strange rumours had just then begun  
To spread, of "spots upon the Sun ;"  
Whilst cleaving through the upper sky,  
I mark'd a "*cat'ract*" on Sol's eye ;  
Dreading disease might quench the sight  
Whence emanates the System's light,\*  
All reckless of fatigue or distance,  
I hastened to afford assistance,

\* Roger Bacon, as well as the Stoics and Platonists, supposed that rays of light were emitted from the eye, and deduced his opinion, amongst other reasons, from the fact, that certain animals possess the power of seeing in the dark.

And, with unequalled skill and labour,  
“*Couch'd*” the great Patient with my Sabre.

Return'd to Earth—I stepp'd from Finland,  
Across the ice, and found “lost Greenland,”  
An Arctic over-ground Pompeii  
Seemed its chief city:—by the *way*, I  
Saw in its haven, streets, and houses,  
The last Whale-killers and their spouses,  
At meals, or in the sledge or skiff—  
As their own stock-fish frozen stiff,  
Like Pagod things, in rice-emboss'd work,  
Or groupes on Twelfth-night-cakes, in frost-work,  
Or “Lot's wife done in salt”—a wag might  
Call each an animal Stalagmite.  
Clearing the Icebergs at a jump,  
I reach'd the long-sought Polar stump,  
And with my sword's well-temper'd point,  
Upon its last and largest joint,  
(Which seem'd, indeed, for alt'-relief meant)  
Carved my Crest, Motto, and Achievement;

The Crest—I hate heraldic loading—  
 Is a plain Thunder-bolt exploding ;  
 A Skull, of nose-bridge reft, and chin-bones,  
 Forcep'd 'twixt a *saltier* of shin-bones,  
 (Modell'd from fossil Man—I guess'd his  
 Age—he was *Diluvii testis*,  
 Found midst anomalous exuviæ,  
 Unknown to Scheuchzer or to Cuvier,\*)  
 Singly and simply fills the field  
 Of my broad unpretending shield ;  
 In proper hands the pregnant motto,  
 Sealed and concealed, shall rest *in petto*,  
 Till Parry, o'er Ice “floes” and “packs,” will  
 Affect t' have reached the Polar axle ;  
 Then shall the sacred seal be broken,  
 And truth developed by the token.

\* The *Homo Diluvii testis* of Scheuchzer, deposited at Haerlem, is referred by Cuvier to the genus *Proteus*. That the specimen used by Thaumaturgus as a model, was truly a “fossil man will not be doubted : he has “studied humanity” too deeply to err.

## My Faulchion.—The Catastrophe.

THOU boldest of the Christian Leaders,  
 Thou Lodestar of the crazed Crusaders,  
 Puissant Knight, Turk-slaught'ring Godfrey !  
 Who slew'st ten thousand—Chiefs and *odd fry*—  
 A Soldan barr'd thy path at Ascalon : \*  
 His giant strength impell'd the Rascal on—  
 For, at the least, he stood as *high* as  
 David's thrasonical Goliath,  
 Whilst a mail suit of hammer'd steel  
 Cased his huge frame from head to heel ;  
 One stroke of thy resistless war-axe  
 Cleft the Turk's morion, skull, and thorax ;  
 Then, as a huxter's knife cuts *dry* cheese,  
 Severed in twain the " os coccygis " —

\* Thaumaturgus, for the sake of the rhyme, which is peculiarly felicitous, has taken a pardonable liberty with topography here. It was *not* at Ascalon that the Crusader King of Jerusalem, on the person of the Turkish Captain, literally reduced to practice, with his battle-axe, the maxim "*Divide et impera.*"

Nor stayed the deep disruption, till it  
 Split him, as woodman splits a billet ;  
 And, reeking with his smoking raddle,  
 Gash'd his scared barb e'en thro' the saddle.  
 The Sabre from my loins dependant,  
 I wrung from Godfrey's true descendant ;  
 'Tis fairly framed, thro' half its length,  
 From that famed axe of proven strength ;  
 The edge, which prudent men in *awe* shun,  
 Was forged from mad Orlando's fauchion.  
 Once thro' a Pagan's neck\* it glided,  
 But then, so dext'rously divided

\* The Poet says, that the upper and lower man were divided by the stroke, and almost appears to attach to Durindana the powers of the spear of Telephus, which could heal as well as wound.

“ So keen the edge of this enchanted steel,  
 The stroke its lord had given, it seemed to heal,  
 Nor did the wretch who met it scarce the anguish feel.”

“ Thus, when Orlando, ranging o'er the plain,  
 Hath at one blow his foeman cut in twain,  
 The path his sword had made so nicely closed,  
 That on *one* half the *other* still reposed,  
 And as, while rage inflates each tumid vein,  
 The ardent warrior knows no sense of pain,  
 Still did the Pagan deal his blows around,  
 Nor, till he fell asunder, knew the deadly wound.”

That isthmus 'twixt the trunk and head,  
 The fool forgot that he was dead ;  
 Whene'er men's midriffs felt its gaff in-  
 -Fixed, their gay ghosts flitted laughing.\*  
 And, as Orlando's sword of flame  
 Rejoiced in a resounding name,  
 (The Knight baptized it DURINDANA,)  
 Whilst the euphonious "style" SAMSANAH,  
 In filigrane of gold, damask-ed  
 The redolent sabre of Al Raschid, †

\* Those wounded in the diaphragm were supposed to die in convulsions of laughter.

† The sword of the Caliph Haroun Al Raschid, was named Samsanah. The Emperor Nicephorus having sent him a present of twenty fine sabres, he, with as many strokes of this famous faulchion, cut through them all, as if they had been so many radishes.—“The strange affectation of giving names to swords was common: Joyosa is the name of Charlemain's sword in Aspramonte; Chrysoar is the name of Arthegal's sword in Spenser; Caliburn of King Arthur's, in the Romance of that name; Ascalon of St. George's, in the Seven Champions; Tranchera of Agrican's, in Boyardo; and in Ariosto, besides Fusberta, we have Rogero's Balisarda, and Orlando's Durindana.”—*Hoole*. Certain sword-cutlers of Damascus, in the middle ages, are supposed to have possessed a secret art of imparting to their blades a delicate and permanent fragrance.

I dubb'd my blade, with true congruity,

SOLUTION OF ALL CONTINUITY!

Anon! in memory of th' event,

I raised a mountain-monument:

Crowning Columbia's Cordilleras

With peaks from th' Himala Sierras—

The point's my "PATMOS," there my hut is,

The monolythic fane of Buttis.\*

And when the sphere-convulsing sound

Shall, peal on peal, thro' Heaven's profound

Speak the avenging thunders hurl'd,

Foredoomed to desolate the world,

There, on my Tripod, o'er the pyre,

While the last Pine-woods† sink in fire,

\* The monolythic Chapel of Latona at Buttis measured forty cubits in every dimension: It was covered by another single stone, forty cubits square and four thick. This enormous load was transported on rafts from the Island of Philœ to Buttis, a distance of two hundred leagues, and was, beyond all doubt, the greatest weight ever moved by the power of man.

† The Mountain Pines, flourishing at an elevation of 14,000 feet above the level of the ocean, will, of course, furnish the crowning billets of "Nature's funeral Pile."

Last lightnings scathe, last earthquakes rive,  
 Last of the Living ! I'll survive.  
 And, while volcanic airs I breathe,  
 Gasp'd from the glowing gulphs beneath,  
 When Earth's brief agony shall cease,  
 I'll seize, to light my "Pipe of Peace,"  
 (Red relic of the Consummation !)  
 The "CAPUT MORTUUM" of Creation.  
 And thus—VAIN VARLETS ! dare ye ape us?—  
 Reduce PLUS ULTRA to a NE PLUS !

End of the Fit.
